Butaca retráctil expuesta a los estándares de calidad mas estrictos.

BABILONIK

Soporte y rodamiento ajustable entre cada viga principal que permite un desplazamiento mas suave además de asegurar la posición correcta de la grada.

Sistema de Motores independientes que pueden cambiar de modo eléctrico a modo manual.

Estructura diseñada con soportes verticales e inclinados para la barra horizontal de cada fila permitiendo soportar mayor carga en la superficie de nuestras gradas.

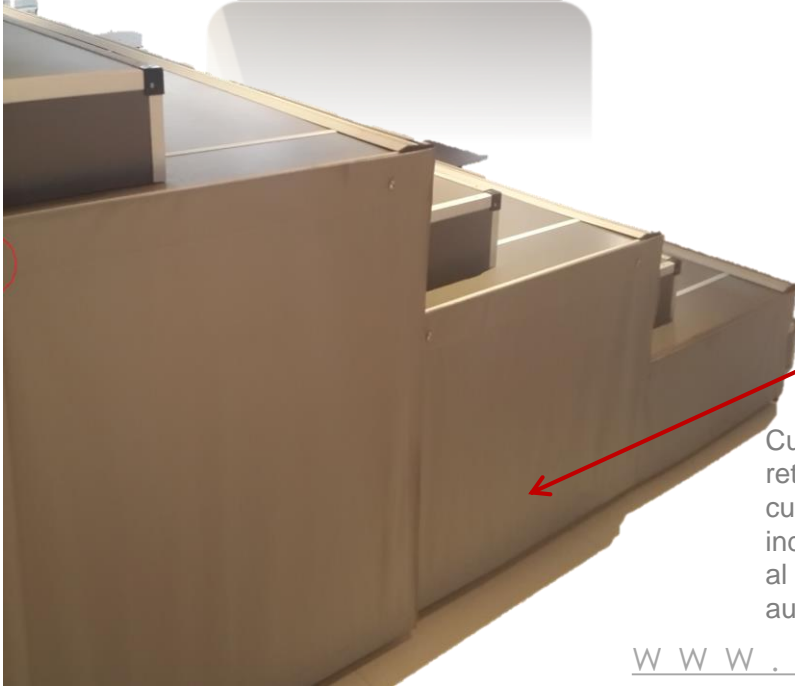

Sistema con ruedas continuas montadas de manera oculta en guía de metal reforzado para reducir ruidos al ser operada.

Sistema de Auto-Bloqueo automático que permite una suave operación, activando cada una conforme se despliega la grada.

Perfil de aluminio en peraltes con tiras fluorescente para seguridad del usuario.

Cubiertas laterales con retardante al fuego, cada fila cuenta con una cubierta independiente permitiendo que al operar la grada estas sean auto almacenadas.

Escalones terminados en aluminio y esquinas con tapas plásticas sin filo.
